

ARCTIC GOVERNANCE PROJECT

A sustainable future for the North

THE CHALLENGE Climate change, coupled with globalization, has triggered a rapidly accelerating cascade of events leading to profound environmental and socioeconomic changes in the Arctic - both on land and at sea. In response, demand is growing for science-based innovation in the conservation, management and governance of Arctic resources. This demand, in turn, has generated an outpouring of new ways of thinking about governance in the Arctic – resulting in a range of proposals for sustaining Arctic communities, ecosystems and biodiversity.

THE ARCTIC GOVERNANCE PROJECT joins preeminent researchers, indigenous leaders, and members of the policy community to frame the critical issues of governance in the Arctic and devise innovative responses for a sustainable future.
